## Abstracts

Black Oxide Service is an industrial finishing process that converts the surface of a ferrous metal (iron-based), copper, copper alloys, or powdered metal into a magnetite (Fe<sub>3</sub>O<sub>4</sub>) layer, which appears as a matte or satin black finish. Unlike plating or painting, which add a separate layer, black oxide is a conversion coating; it transforms the top layer of the metal itself through a chemical reaction. The process is also commonly known as blackening, bluing (when referring to a specific type used on firearms), or black passivation.

The global Black Oxide Service market size was estimated at USD 655.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
