The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Black Silicon Carbides for Sandblasting competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Black silicon carbide for sandblasting is an industrial abrasive with extremely high hardness and excellent wear resistance. It is widely used in metal surface treatment, rust removal, deburring, roughening treatment and surface sandblasting of glass, ceramics and other materials. Black silicon carbide is made by high-temperature melting of quartz sand, petroleum coke and high-quality anthracite in a resistance furnace. Its sharp edges and high brittleness make it easier to break during the impact process to form new sharp-angle particles, improving cleaning efficiency and surface treatment quality.
