The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Blade Composite Sheet Substrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The blade composite substrate is the core substrate used to manufacture super-hard cutting tools. It is made of tungsten carbide cemented carbide material and is sintered through a powder metallurgy process. As a support carrier for the super-hard wear-resistant layer of polycrystalline diamond or cubic boron nitride, it provides a high-strength base for the cutting edge, ensuring that the tool maintains dimensional stability and impact toughness during high-speed machining. The upstream industry chain of the blade composite substrate is the supplier of cemented carbide powder raw materials, the midstream includes manufacturing links such as pressing, sintering and fine grinding, and the downstream serves cutting tool manufacturers and end-users. The global annual production capacity reaches hundreds of thousands of pieces, which belongs to a large-scale standardized production model. Due to mature technology and sufficient market competition, its gross profit margin is at a medium level in the cutting tool industry. In 2024, the output of blade composite substrates was approximately 860,000 pieces, and the average global market price was approximately US\$120 per piece. The blade composite substrate market is being driven by both manufacturing transformation and upgrading and the growing demand for efficient machining. Its prospects are deeply intertwined with the development of intelligent manufacturing and the increasing requirements for machining precision, placing higher demands on product consistency and stability. The European market, leveraging its deep industrial foundation and leading equipment manufacturing technology, continues to define the technical standards for high-performance products. The North American market, with its developed automotive and aerospace industries, maintains a steady

demand for high-reliability solutions. The Asia-Pacific market, particularly China, demonstrates the strongest growth potential thanks to its world-leading manufacturing scale and demand for industrial upgrading, and is rapidly becoming a significant global production base and consumer market.

The global Blade Composite Sheet Substrate market size was estimated at USD 103.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
