Report Overview:

Blade lifter uses the inclination of the blade to make it easier to transport. By means of a mechanism, normally a hydraulic lift, the blade is raised, reaching an inclination of around 65 degrees, or even rotated, to avoid the sail effect of the wind, thus making it easier to drive on narrow roads, with sharp bends or even through urban centres. Transport is carried out using a trailer, with at least ten axles. This mechanism is incorporated behind the tractor head, which allows both turning the blade and lifting it in the vertical plane, always fixing the base of the blade.

The Global Blade Lifter Market Size was estimated at USD 1312.76 million in 2023 and is projected to reach USD 1779.43 million by 2029, exhibiting a CAGR of 5.20% during the forecast period.
