Report Overview

Blast chillers are the devices that are operated in commercial kitchens for quick cooling of foodstuff, either fresh or pre-cooked by diffusing a cool air in it maintaining its essence. Blast chillers are the machines operated with HACCP (hazardous analysis and critical control points) standards which conserve the quality of food healthiness by forbidding it from all sort of risks. In the blast chillers, temperature reduces from 75°C to 2°C in not more than 95 min when it comes to cooling and for freezing blast chillers are required to reduce the temperature from 75°C to -17°C in just 250 minutes. Blast chillers increase the life of food products. The food preserved in blast chillers is much healthier than standard freezers as it prevent all types of risk to maintain the healthiness of foods.

Growing demand for preservation of fragrance and quality of food for a longer time is fueling the growth of the blast chillers market. Blast chillers also reduce the food temperature in less than 90 minutes. The process has gained popularity in the market due to its use in preparing instant food, as it ensures food safety and keeps the food quality intact for a longer time.
