## Abstracts

BLDC (Brushless DC) motor controllers and drivers are electronic devices used to regulate the operation of brushless DC motors, which are widely used in applications requiring efficient, high-performance motors such as in robotics, electric vehicles, and industrial equipment. The controller manages the motor's speed, direction, and torque by providing precise electronic commutation, which replaces the mechanical brushes used in traditional motors. The driver supplies the necessary power to the motor and works in conjunction with the controller to ensure optimal performance. By efficiently controlling the motor's electrical input, BLDC motor controllers and drivers enhance performance, reliability, and energy efficiency, while reducing maintenance needs compared to brushed motors.

The global BLDC Motor Controllers and Drivers market size was estimated at USD 3135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
