Abstracts

BLDC Motor Driver and Control ICs are integrated circuits designed to manage and control Brushless DC (BLDC) motors, which are widely used in applications requiring high efficiency, reliability, and precise control, such as in electric vehicles, drones, and industrial automation. These ICs handle the electrical drive and control functions necessary for operating a BLDC motor, including switching the power to the motor's windings, regulating speed, and managing direction and torque. They typically include features such as pulse-width modulation (PWM) for speed control, feedback mechanisms for position sensing, and protection functions to prevent overcurrent and overheating. By integrating these functions into a single chip, BLDC Motor Driver and Control ICs simplify the design, improve performance, and enhance the overall efficiency of motor control systems.

The global BLDC Motor Driver and Control ICs market size was estimated at USD 3135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
