Abstracts

Bleached linter cellulose is a high-purity cellulose derived from the short cotton fibers, or linters, that remain on cottonseed after ginning, which are then chemically treated and bleached to remove impurities like lignin, hemicellulose, and waxes, resulting in a white, odorless, and highly refined material known for its high alpha-cellulose content, uniformity, and absorbency, making it a critical raw material in industries such as pharmaceuticals (for tablet binders and excipients), food (as a stabilizer or dietary fiber), cosmetics (in creams and lotions), and specialty applications like filtration and explosives manufacturing, where its consistent quality and chemical purity are essential.
