Report Overview

Blended Fibers are a mixing of different fibers. The properties of the fibers blended are combined and made into a modified state in a blended fabric. If blending is done carefully the good qualities of the fibers are emphasized minimizing the poor qualities. The important reason for blending fibers is to produce better performance. By blending we can improve the characteristics that are poor in one fiber, by blending it with another type of fabrics that excel in those characteristics. For example polyester when blended with cotton, the resultant fabric has moderate absorbency which is almost nil in polyester. It can also help to improve the texture, reduce the cost, produce cross-dyed effects and improve spinning.
