Abstracts

A blender pump is similar to a standard gasoline pump but works on the principle of drawing two fuels from separate storage tanks containing unleaded or gasoline and E85 and mixes them together in various percentages to form a variety of fuel choices. A blender pump is used to blend the mixture in the appropriate percentages to create mid-level ethanol blends in varying strengths such as E20, E30, or E50, in addition to E10 and E85. Blender pump stations have the advantage of blending economics of higher-volume ethanol sales. Consumers have different fuel choices based on the different fuel efficiencies. Various mixtures of fuel have been approved as safe to use in various vehicles.
