Report Overview

Blind Rivet Nuts and Studs are fasteners used to create secure threaded connections in situations where access from both sides is not possible. Blind rivet nuts are installed from one side and use an internal expansion mechanism to form a stable connection in the threaded section, while studs provide a fixed point for bolts. They are widely used in automotive manufacturing, aerospace, and industrial equipment. The design of blind rivet nuts and studs allows for installation from one side, making them particularly important in applications where access from the other side is not feasible.
