Abstracts

As companies and individuals are looking for tools to mitigate their impact on climate change, carbon credits are gaining traction as they incentivize the fossil fuel industry to become more efficient. A carbon credit is a tradable permit or certificate that gives the right to emit one ton of carbon dioxide or an equivalent of another greenhouse gas. The current carbon offset market is beset with inefficiency. As of now, credits are sold in bulk to larger corporations. This results in barriers for smaller groups or individuals to equilibrate their environmental impact by purchasing offsets. Blockchain stores data and transactions on a distributed ledger that is accessible to everyone on the network, thus enabling greater transparency. Due to the transparent nature of blockchain, it can be leveraged for the trading of carbon credits while aggregating small buyers for carbon offset projects. Furthermore, the blockchain based carbon credit ecosystem is safe, efficient, and uniquely suited for implementing carbon credit markets. The immutable, cryptographically-secured distributed ledger enables reliable issuance and tracking of carbon credits. Public blockchains can be easily accessed by small and medium-sized enterprises, thereby reducing the entry threshold for the carbon trading market.

The global Blockchain-based Carbon Credit Platform Development market size was estimated at USD 356.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
