## Abstracts

Blockchain-based Service Network (BSN) is a consortium chain technology that provides a public infrastructure network that can be developed, deployed, operated, maintained, interoperated, and able to supervise consortium chain applications at low cost. The high cost of the applied local area network architecture provides developers with a public blockchain resource environment based on the world-wide-web concept, which greatly reduces the deployment, operation, maintenance, interoperability, and regulatory costs of blockchain applications, thereby making blockchain technology widespread. Blockchain-based service networks (BSNs) were emerging as a notable trend in the blockchain industry. BSNs aimed to provide a more accessible and scalable infrastructure for blockchain development and deployment. BSN initiatives expanded to various countries and regions, including China, Europe, the United States, and Southeast Asia. Each region had its approach to BSN, with varying levels of government support and participation. Interoperability remained a critical focus in the BSN market. BSNs aimed to enable seamless communication and data exchange among different blockchain platforms and networks, promoting cross-chain compatibility.

The global Blockchain-based Service Network market size was estimated at USD 5011.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
