Abstracts

The foundation of any decentralized blockchain network is made up of nodes. These nodes play the essential role of verifying transactions, preserving the ledger's integrity, and safeguarding the blockchain's overall security and immutability. However, the process of setting up and managing your own blockchain nodes poses significant challenges in terms of cost, time investment, and technical requirements. Blockchain Nodes as a Service (NaaS) emerges as a solution, providing developers and businesses with a streamlined and accessible method to leverage blockchain networks without the associated operational burdens. The blockchain node-as-a-service (NaaS) market is in a period of rapid expansion, with the core driving force coming from the explosive growth of the Web3 ecosystem and the rigid demand of developers for efficient infrastructure. With the popularity of DeFi, NFT, GameFi and enterprise blockchain applications, the market demand for stable, low-latency node access has surged, driving leading providers (such as Infura, Alchemy, QuickNode) to continuously optimize multi-chain support and API performance, while emerging decentralized solutions (such as Pocket Network) enter the competition with censorship resistance. Enterprise-level customers have significantly increased their demand for security compliance (such as SOC2 certification) and dedicated nodes, while cloud vendors (AWS, GCP) have further intensified the involution of the track through managed node services. Future competition will focus on cross-chain compatibility, enhanced data interface development and decentralized architecture innovation, and the market will mature in the exploration of head-centralized and diversified models.

The global Blockchain Nodes as a Service (NaaS) market size was estimated at USD 148.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
