Abstracts

Blockchain Service (Bcs) refers to a broad category of enterprise-focused offerings that enable organizations to build, deploy, and manage applications using distributed ledger technology (DLT), including both private and public blockchain networks. These services typically provide infrastructure, development tools, and managed solutions such as smart contract development, decentralized application (dApp) hosting, node management, and interoperability with existing enterprise systems. Bcs aims to enhance operational efficiency, security, and transparency by leveraging blockchain's inherent features—immutability, decentralization, and cryptographic verification—to support use cases across industries like finance, supply chain, healthcare, and digital identity.
