Abstracts

Blockchain supply chain refers to the application of distributed ledger technology (DLT) to enhance the transparency, traceability, and efficiency of supply chain operations by recording every transaction, movement, or change in asset ownership across a decentralized and immutable digital ledger. This system enables stakeholders?from raw material suppliers to end consumers?to access a single, verifiable source of truth in real-time, reducing fraud, errors, and delays while improving accountability and compliance. Key features include smart contracts for automating agreements, cryptographic security to prevent tampering, and tokenization to represent physical or digital assets, making it particularly valuable in industries requiring stringent provenance tracking, such as food safety, pharmaceuticals, luxury goods, and logistics.

The global Blockchain Supplychain market size was estimated at USD 1820.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 45.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Blockchain Supplychain market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
