Report Overview

Blood preparation refers to the processing and treatment of blood and its components, including whole blood, plasma, platelets, and red blood cells, for therapeutic or diagnostic use. This involves collection, testing, separation, storage, and distribution to ensure safety, efficacy, and compatibility for transfusions, medical treatments, or research applications. The market is driven by increasing demand for blood transfusions in surgeries, trauma cases, and chronic diseases like cancer and anemia, alongside advancements in blood processing technologies and stringent regulatory standards to prevent contamination.
