Abstracts

Blow molding services refer to a manufacturing process and related service activities that use the blow molding technique to produce plastic products. Blow molding is a plastic processing method that mainly forms plastic into hollow products. The basic process is as follows:1. Parison Preparation: - Heat plastic pellets (such as polyethylene, polypropylene, PVC, etc.) to melt them, and then form them into a cylindrical "parison" (a hollow plastic tube with a certain shape). - The parison can be produced by extrusion (extrusion blow molding) or injection molding (injection blow molding).2. Molding: - Place the parison into a mold, and then inject compressed air into the parison to make it expand and adhere to the inner wall of the mold. - Cool and solidify to form the final product shape.3. Post-Processing: - Remove the product from the mold and perform operations such as trimming, deburring, and surface treatment (such as printing, coating, etc.).
