## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Blown Film Die competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The film blowing die is the core component of the film blowing machine. It is mainly used to extrude the molten polymer plastic through the extruder and evenly distribute it in the flow channel structure inside the die to finally form a film. The film is inflated by air pressure, and the die controls the thickness, width and performance of the film. The rationality of the die design directly affects the quality of the film, involving the precise control of temperature, flow channel and pressure.

The global Blown Film Die market size was estimated at USD 4140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
