Abstracts

A Blue Roof System is a non-vegetated storage system made of stone and a sealed waterproof roof membrane that allows the roof to retain stormwater. The collected stormwater is then slowly released to roof drains or allowed to evaporate. Due to the density of urban development, cities generally lack permeable surfaces. Cities are prone to flooding due to the lack of areas for rainwater to infiltrate back into the ground. While blue roofs do not remove pollutants by temporarily trapping pollutants in the water, they do reduce the load on storm sewers from storm events, preventing emergency overflows of combined sewer systems that discharge untreated wastewater to Rivers, streams and coastal waters. Cities with limited rainfall, on the other hand, are vulnerable to drought and chronic water restrictions. In dry climates, the blue roof acts as a water conservation tool, collecting water that falls on the roof surface and collecting it at a controlled rate.

The global Blue Roof System market size was estimated at USD 480.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
