Abstracts

The BNC interface is a 10Base2 connector, that is, a coaxial thin cable connector. It can isolate the video input signal, reduce the interference between signals, and the signal bandwidth is larger than that of the ordinary 15-pin D-type interface, which can achieve better signal response effect. The network card of this interface corresponds to the Ethernet or Token Ring with thin coaxial cable as the transmission medium. This type of network card is rare, mainly because there are fewer networks using thin coaxial cable as the transmission medium. . It is mostly used in security industry monitors to transmit video signals and cable TV indoor wall interfaces. Only some new products in the 17-inch and above monitors have this interface. Its video signal input lines are composed of five lines of R, G, B, horizontal scanning, and vertical scanning. This connector can separate the input signals of the three primary colors in the video and make them independent of each other, which can avoid interference to the greatest extent. As a result, video input characteristics are improved. Because of this, the BNC method has always been one of the characteristics of professional-grade monitors.
