Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Board Type PLC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Board Type PLC (Programmable Logic Controller) refers to a compact, circuit board-based industrial control unit designed to perform automation logic, sequencing, and process control in machinery and equipment where embedded integration or space efficiency is required. Unlike rack-mounted or modular PLCs, board-type PLCs are built directly onto PCBs for OEM use or embedded control, offering cost-effective automation with digital/analog I/O, communication interfaces, and customizable firmware for system-specific applications. The industry chain for board-type PLCs begins upstream with semiconductor manufacturers, PCB suppliers, microcontroller and memory chip producers, and electronic component vendors; the midstream includes PLC board design, assembly, and firmware integration performed by automation manufacturers or ODMs; and downstream encompasses system integrators, OEM machine builders, and industrial end users adopting board PLCs in embedded control systems. Supporting industries such as software tool developers, IoT platform providers, and distributors contribute to integration and after-sales service, forming a complete ecosystem that links component innovation with industrial automation deployment globally. Ongoing projects include expansions by leading PLC manufacturers such as Delta Electronics, and LS Electric in Southeast Asia and China, focusing on compact PLC and embedded control production. Multiple new smart manufacturing plants in India, Vietnam, and Eastern Europe are also being equipped with board-type PLC assembly lines for OEM exports. Several R&D programs in Japan and Germany are developing AI-enabled embedded PLC boards supporting predictive maintenance and real-time IoT integration. Additionally, automation component suppliers are investing in cloud-based PLC

configuration software and testing platforms for next-generation embedded industrial controllers. 2024 Global Market sales Volume: 2.5 million units, Average Global Market Price: USD 250 per unit, Market Average Gross Profit Margin: 32%.

The global Board Type PLC market size was estimated at USD 625.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
