Abstracts

The boat watertight door is a door with watertightness on the watertight bulkhead. Commonly used are hinged watertight doors and sliding watertight doors. It is usually a metal door. The former has a light structure and is easy to open and close; the latter is used in places with limited water pressure and limited status. Hinged doors can be operated manually or hydraulically/electrically, while sliding doors are always hydraulic/electrically operated. Watertight doors minimise the risk of sinking by minimising the ingress of water during a grounding or collision or when the vessel suffers structural damage. Watertight closures are designed to withstand continuous immersion and are therefore located below the waterline in access to pipe tunnels, storerooms, bow thruster compartments and other mechanical spaces, or above the waterline in the form of pilot doors and bunker doors. All openings below the waterline must be watertight as they are to maintain the watertight integrity of the hull and can withstand water pressure from both sides. The demand for watertight doors is expected to be driven by several factors, including increasing demand for offshore substations. The increasing importance and criticality of maritime surveillance by naval patrol vessels at sea has also resulted in high demand for watertight doors. Moreover, preference of buyers for advanced doors and hatches further accelerates the growth of the market. Increased investment in redevelopment of blast proof and watertight doors in order to provide high quality products to consumers coupled with growing demand for marine doors and hatches equipped with hydraulic and pneumatic operation has had a major impact on the market. The market is positively influenced by factors such as ongoing commercialization, increasing trade practices between economies, increasing safety awareness among ship crews, and rising trend towards renewable energy at sea. Furthermore, the adoption of advanced technologies to manufacture carbon-friendly and energy-efficient ships offers market players lucrative opportunities during the forecast period.

The global Boat Watertight Doors market size was estimated at USD 324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
