Abstracts

A boat zinc replacement service is a specialized service focused on the replacement of zinc anodes on boats. Zinc anodes, also known as sacrificial anodes, are attached to the boat's underwater parts such as the hull, propeller shafts, and rudders. Their primary function is to protect the boat's metal components from galvanic corrosion. Over time, these zinc anodes corrode instead of the more valuable metal parts of the boat. The boat zinc replacement service involves assessing the condition of the existing anodes, removing the depleted ones, and installing new, high - quality zinc anodes. This service is crucial for maintaining the integrity of the boat's metal structures and ensuring a longer lifespan for the boat's underwater components, as well as for preventing costly repairs due to corrosion - related damage.

The global Boat Zinc Replacement Service market size was estimated at USD 513.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
