## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bobbinless Coil Winding Machines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bobbinless Coil Winding Machines are specialized systems designed to wind conductive wire directly onto a core, stator, or form without the use of a bobbin, enabling higher space utilization and improved electromagnetic performance. Unlike traditional bobbin winding, this method allows the coil to be wound more densely and precisely, enhancing the efficiency, power density, and thermal characteristics of components such as automotive motors, electric vehicle drives, inductors, and transformers. The process typically employs needle winding, flyer winding, or linear winding techniques, with automated tension and path control to ensure consistent coil geometry. In 2024, global Bobbinless Coil Winding Machines production reached approximately 15.8 k units, with an average global market price of around US\$ 9539 per unit. And global Bobbinless Coil Winding Machines production capacity reached approximately 18 k units. The average gross margin in this industry reached 22.64%. Upstream: The upstream of the Bobbinless Coil Winding Machines industry mainly comprises suppliers of precision servo systems, control electronics, copper wire, and winding tooling. Unlike traditional bobbin-based designs, these machines rely on high-accuracy motion systems, wire tension controllers, and programmable automation to wind self-supporting coils directly. Core materials include enameled copper wire, insulation coatings, and high-performance bearings. Representative upstream companies include Siemens (servo and control systems), Sumitomo Electric Industries (magnet wire), and NSK (precision mechanical components). Upstream innovation emphasizes precision motion control, real-time feedback loops, and automation integration to achieve dense, uniform coil structures. Downstream: Downstream

industries include electric motors, inductors, transformers, and automotive electronics, which increasingly adopt bobbinless coils for space-saving and performance benefits. These coils enable higher magnetic efficiency, improved cooling, and greater design flexibility, particularly in EV traction motors, power converters, and wireless charging systems. Representative downstream companies include Bosch (automotive electronics), Hitachi Energy (power components), and Panasonic (electromechanical devices). With the electrification of transportation and growth in high-frequency power electronics, downstream demand is shifting toward high-speed, AI-assisted winding machines that support compact, automated, and defect-free coil production.

The global Bobbinless Coil Winding Machines market size was estimated at USD 151.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
