Report Overview

Personal protective equipment (PPE) is protective clothing, helmets, goggles, or other garments or equipment designed to protect the wearer's body from injury or infection. The hazards addressed by protective equipment include physical, electrical, heat, chemicals, biohazards, and airborne particulate matter. Protective equipment may be worn for job-related occupational safety and health purposes, as well as for sports and other recreational activities. 'Protective clothing' is applied to traditional categories of clothing, and 'protective gear' applies to items such as pads, guards, shields, or masks, and others. PPE suits can be similar in appearance to a cleanroom suit.

Hand protection takes a leading share in the global demand accounting for 25.59% of the overall personal protective equipment revenue in 2019. High demand from various end-use industries including pharmaceuticals, food, chemicals, manufacturing and construction may be attributed to the high market penetration.

Manufacturing was the largest end-use segment in 2019 accounting for over 33% of global market, and is projected to remain the dominant segment over next eight years. Growing transportation and food sector in emerging economies such as India and China coupled with rising workforce capacities is expected to augment product demand in future on account avoiding overhead costs such as compensation. Demand from Oil & gas would grow at moderate rate due to the impact of COVID-19.
