## Abstracts

Body RF microneedling is a technology and device used for body skin beauty and treatment. It combines microneedle and radio - frequency (RF) technologies. Microneedles refer to tiny needle - shaped probes that can precisely penetrate the skin surface to create microscopic channels in the skin. Radio - frequency is an electromagnetic wave energy generated by high - frequency alternating current. During the operation, the microneedles deliver RF energy precisely to the tissues at a specific depth in the skin. This technology can stimulate the production and remodeling of skin collagen, improve skin texture and elasticity, reduce skin imperfections such as wrinkles, acne scars, and stretch marks. It can also promote skin metabolism and enhance skin tightness, and has a certain effect on improving and repairing skin problems in different parts of the body, such as the abdomen, arms, and legs.

The global Body RF Microneedling market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
