Abstracts

Boiler water level control refers to ensuring that the water level in the boiler is kept within a safe, stable and reasonable range through various control means and methods. Boiler water level control is essential to ensure the normal operation and safety of the boiler, because too low a water level will cause the boiler to overheat, which may lead to the risk of burning the boiler dry, while too high a water level may cause steam to carry water, reduce steam quality, and may even cause the boiler to explode.

The global Boiler Water Level Controls market size was estimated at USD 678.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Boiler Water Level Controls market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
