A steam generator is a form of low water-content boiler, similar to a flash steam boiler. The usual construction is as a spiral coil of water-tube, arranged as a single, or monotube, coil. Circulation is once-through and pumped under pressure, as a forced-circulation boiler.[1] The narrow-tube construction, without any large-diameter drums or tanks, means that they are safe from the effects of explosion, even if worked at high pressures.

The global Boilers And Steam Generators market size was estimated at USD 30750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.
