Abstracts

The bolt carrier group performs all these tasks by harnessing the gas produced by the round being fired. A gas tube connects a gas port on the barrel to the gas /carrier key atop the BCG. This key forces all that high-velocity gas into the body of the BCG. When this happens, the BCG unlocks and drives backward into the buffer tube, compressing the buffer and buffer spring. The compressed buffer spring re-expands rapidly, driving the BCG back into the upper receiver.
