Abstracts

Bolted bonnet gate valves are industrial flow control devices characterized by a removable bonnet secured to the valve body with a series of bolts, allowing for easier maintenance and inspection of internal components such as the gate, stem, and seats. These valves are designed to provide a tight seal when fully closed, effectively blocking fluid flow, and are typically used in fully open or fully closed positions rather than for throttling. Commonly constructed from materials like carbon steel, stainless steel, or alloys to withstand high pressures and corrosive environments, they are critical in industries such as oil and gas, petrochemicals, water treatment, and power generation, where reliability, durability, and leak-proof performance under extreme conditions are essential.

The global Bolted Bonnet Gate Valves market size was estimated at USD 2500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
