Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bonded Anchor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, global production of bonded anchors will reach approximately 45 million units (or 45 million units), with an average selling price of US\$15 per unit. Bonded anchors, also known as chemical anchors, are anchors used to fix components to substrates (such as concrete, brick walls, etc.). They consist of a metal rod (usually stainless steel or high-strength alloy steel) and a special chemical adhesive. During installation, the metal rod is first inserted into the pre-drilled hole, and then the chemical adhesive is injected. After the adhesive cures, the metal rod is firmly bonded to the substrate to play an anchoring role. The bonded anchor market is experiencing steady expansion, driven primarily by accelerating global infrastructure investment, particularly in the Asia-Pacific region, with strong growth in regions such as China and India. Technological innovation is driving the emergence of high-performance, environmentally friendly adhesives (such as low-VOC epoxies) to meet the demands of green building and sustainable development. Applications are also expanding, extending from traditional construction to emerging sectors such as wind power, rail transit, and marine engineering. Market competition is showing signs of differentiation, with international brands dominating the high-end market, while local companies are gradually increasing their market share through technology introduction and product differentiation. Furthermore, policy support, such as the Belt and Road Initiative, urban renewal, and seismic retrofitting, is fueling sustained growth in the industry.

The global Bonded Anchor market size was estimated at USD 677.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the

forecast period.
