Report Overview

Bonded or flexible permanent magnets, also known as bonded magnets or flexible magnets, are a type of magnetic material created by mixing magnetic powders, typically ferrite or rare-earth powders, with a polymer binder. This mixture is then compressed, molded, or calendared (rolled) into various shapes and sizes. The resulting composite material exhibits magnetic properties while also being flexible and moldable, making it suitable for a wide range of applications where traditional rigid magnets cannot be easily employed.
