## Abstracts

Boom lattice crane is a type of lifting equipment widely used in heavy engineering projects such as construction, bridges, and mines, with high load-bearing capacity and long operating radius. Its main structure consists of a truss-type boom and base. The boom is composed of multiple cross-connected steel bars to form a solid frame structure. This design allows the crane to maintain a light deadweight while providing high-strength support, thereby improving the crane's stability and load capacity. Boom Lattice Cranes are usually equipped with adjustable arm lengths and lifting capacities, enabling precise heavy lifting operations on construction sites. Due to its structural characteristics, this type of crane is suitable for working environments with small spaces or complex terrains, and can perform lifting operations over long distances. It is one of the indispensable equipment in large-scale construction projects.

The global Boom Lattice Crane market size was estimated at USD 3466.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
