Abstracts

A borehole enlargement system refers to specialized drilling equipment and tools designed to increase the diameter of a wellbore after initial drilling, typically through techniques such as underreaming or hole opening. These systems are engineered to deploy cutting structures—often with hydraulically or mechanically activated arms—that extend radially to excavate additional formation material, thereby creating a larger cavity. This process is critical in oil and gas, geothermal, and mineral exploration operations, where it facilitates improved cementing, casing installation, well stability, or enhanced reservoir exposure. The technology integrates components like reamers, stabilizers, and measurement-while-drilling (MWD) tools to ensure precision, reliability, and real-time monitoring downhole.

The global Borehole Enlargement System market size was estimated at USD 75.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
