Abstracts

Boron was named for the mineral borax, thought to come from the Persian name burah for that mineral. Boron minerals, mainly borax, were traded over a thousand years ago, when sheep, camel and yak caravans brought borax from desert salt beds in Persia and Tibet to India and the Arab countries. There it was used mainly in making glass. The major ores of boron are a small number of borate (boron oxide) minerals, including ulexite ($\text{NaCaB}_5\text{O}_9 \cdot 8\text{H}_2\text{O}$), borax ($\text{Na}_2\text{B}_4\text{O}_5(\text{OH}) \cdot 4.8\text{H}_2\text{O}$), colemanite ($\text{Ca}_2\text{B}_6\text{O}_{11} \cdot 5\text{H}_2\text{O}$) and kernite ($\text{Na}_2\text{B}_4\text{O}_6(\text{OH}) \cdot 2.3\text{H}_2\text{O}$). These minerals form when boron-bearing waters percolate into inland desert lakes and evaporate, leaving layers of borates, chlorides, and sulfates. These minerals are referred to as evaporite minerals. Very large deposits of evaporite boron minerals are found in the United States (especially California), Turkey, Chile and Argentina. Less-important deposits occur in Iran (formerly called Persia), and elsewhere. Turkey is the largest producer of Boron, with a market share about 45%. It was followed by North America with 30%. Etimine, Rio Tinto and Searles Valley Minerals are the top 3 manufacturers of industry, and they had about 75% combined market share.

The global Boron market size was estimated at USD 2672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
