The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Boronized Polyisobutylene Succinimide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Borated polyisobutylene succinimide is a boronized ashless dispersant prepared by a thermal addition process based on highly reactive polyisobutylene. It is primarily used as a lubricating oil additive, made from highly reactive polyisobutylene and succinimide. Its function is to disperse and inhibit the formation of engine carbon deposits, sludge, and varnish, while also providing anti-wear and anti-oxidation properties. Its core raw materials include polyisobutylene, maleic anhydride, and tetraethylenepentamine. Performance is improved through borylation modification technology. It contains no chlorine and meets environmental protection requirements. The product is a brownish-black viscous liquid with excellent oil solubility and stability. Global sales in 2024 were approximately 50,000 tons, with an average market price of approximately US\$3,000 per ton. The industry's gross profit margin is in the range of 20%-35%.

The global Boronized Polyisobutylene Succinimide market size was estimated at USD 150.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
