Abstracts

Borosilicate glass is a type of glass with the main glass-forming constituents of silica and boron trioxide. Borosilicate glasses are known for having very low coefficients of thermal expansion, making them resistant to thermal shock, more than any other common glass. Such glass is less subject to thermal stress and is commonly used for the construction of ampoule bottle, etc. Tip: At present, many players directly manufacture their own borosilicate glass into downstream products such as laboratory instruments and pharmaceutical packaging. The added value has increased several times and the data cannot be counted. Therefore, the report only deals with primary forms of products, namely primary forms of glass tubes, glass rods, and glass plates.

The global Borosilicate Glass market size was estimated at USD 1139.49 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Borosilicate Glass market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
