Abstracts

Bot detection software refers to a category of cybersecurity tools designed to identify and mitigate non-human, automated traffic?commonly known as bots?that interact with websites, applications, or APIs. These solutions utilize a combination of behavioral analysis, machine learning algorithms, fingerprinting techniques, and threat intelligence to distinguish between legitimate human users and malicious or unwanted automated agents, such as scrapers, credential stuffers, spam generators, or distributed denial-of-service (DDoS) bots. The primary goal is to protect digital assets from fraud, data theft, service abuse, and performance degradation while minimizing disruption to genuine user experiences. The market is expanding rapidly due to the escalating sophistication of bot-driven attacks, increasing regulatory pressures around data protection, and the growing reliance on digital channels across industries such as e-commerce, financial services, and media. Key players range from specialized cybersecurity firms to broader platform providers integrating bot management into holistic security suites, with innovation centered on real-time adaptability, low false-positive rates, and seamless integration with existing infrastructure.

The global Bot Detection Software market size was estimated at USD 580.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.20% during the forecast period.
