## Abstracts

Bottle-free water coolers, also known as Point of Use (POU) water coolers, are devices that are directly connected to the water supply pipeline. These water coolers filter, purify, and provide drinking water on demand without the need for bottled water, eliminating the hassle of frequently replacing water bottles. Compared to traditional bottled water dispensers, bottle-free water coolers do not require the additional transport, storage, and handling of bottled water, making them cost-effective and environmentally friendly by significantly reducing plastic waste. The key advantage of bottle-free water coolers lies in their convenience and cost savings. They are typically equipped with advanced filtration systems, such as activated carbon filters, reverse osmosis (RO) technology, and ultraviolet (UV) disinfection, to remove harmful substances from the water, ensuring safe and healthy drinking water. In addition, these coolers have compact designs that cater to various environments, including homes, offices, factories, and schools. By directly connecting to the water supply pipeline, bottle-free water coolers offer an uninterrupted source of clean water, eliminating concerns about water shortages.

The global Bottle-free Water Cooler market size was estimated at USD 2100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
