The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bovine Colostrum Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bovine Colostrum is a milky fluid that comes from the breasts of cows the first few days after giving birth, before true milk appears. In 2024, global Bovine Colostrum production reached approximately 3,637 tons, with an average global market price of around US\$ 53.1 per kg.
