Abstracts

BPM-platform-based case management software is configurable "apps" meant to help solution architects accelerate the delivery of unique and flexible case management solutions. Case management frameworks (CMFs) are commercial software offerings designed to reduce the time and complexity of creating case-style process solutions by providing architectural patterns and at least some business domain capabilities "out of the box." Work is caselike when each work item - each case - requires unique handling, involving complex interactions between content, people, transactions and business or regulatory policies in order to deliver an optimal outcome. Case-style processes do not progress in a serial or completely predictable fashion. Rather, they often require multiple dependent workflows to be orchestrated, making them particularly complex to architect. Very often, caseworkers need the flexibility to decide the best next action for a case, rather than following a prescribed workflow. The average gross profit margin in this industry is around 60%.

Market Drivers

1. Digital Transformation Imperative: Organizations are moving away from paper-based, siloed, and email-driven case handling toward streamlined, digital, and auditable processes.
2. Demand for Operational Agility: The COVID-19 pandemic highlighted the need for systems that can adapt quickly to new types of cases and changing regulations (e.g., managing PPP loan applications or public health contact tracing).
3. Focus on Customer & Citizen Experience: Customers and citizens demand transparency, faster resolution times, and the ability to track the status of their case online. BPM-based case management provides this visibility.
4. Rise of Knowledge Work: The modern economy is dominated by processes that rely on expert judgment and dynamic response to new information, which is the core strength of case management.

estimated at USD 1428.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
