Abstracts

Braid reinforced shafts are specialized cylindrical components, typically constructed from composite materials such as carbon or glass fibers, where a woven braided structure is layered around a core to enhance torsional rigidity, vibration damping, and fatigue resistance while minimizing weight. These shafts are engineered to transmit torque and rotational power efficiently in demanding applications where traditional solid or non-braided shafts would be prone to failure, deformation, or excessive weight, making them critical in industries that prioritize high strength-to-weight ratios and dynamic performance under stress.

The global Braid Reinforced Shaft market size was estimated at USD 780.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
