## Abstracts

A brake actuator is a mechanical or electronic device responsible for applying force to activate the braking system in a vehicle. Its primary function is to convert an input signal or force into a braking action, either by physically engaging brake components (such as brake pads or shoes) or by controlling an electronic braking system.

**Shift towards Electronic Braking Systems:** The automotive industry has been experiencing a shift towards electronic braking systems, including brake-by-wire technologies. This trend involves the use of electronic brake actuators that allow for more precise control of braking functions and integration with advanced driver assistance systems (ADAS).

**Integration of Advanced Safety Features:** Brake actuators are becoming integral components in the implementation of advanced safety features, such as Anti-lock Braking Systems (ABS), Electronic Stability Control (ESC), and Collision Avoidance Systems. The integration of these features influences the demand for sophisticated brake actuation technologies.

**Development of Autonomous Vehicles:** The ongoing development of autonomous vehicles has spurred advancements in braking technologies. Brake actuators play a crucial role in the development of autonomous braking systems that are capable of making rapid and precise decisions based on sensor inputs.

The global Brake Actuator market size was estimated at USD 4287.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
