Abstracts

Brake fluid is a type of hydraulic fluid used in hydraulic brake and hydraulic clutch applications in automotive, motorcycles, light trucks, Agriculture Vehicles, off highway, motorsport, etc. It is used to transfer force into pressure, and to amplify braking force. The function of brake fluid is to provide an incompressible medium to transmit the driver's foot pressure on the brake pedal through the master cylinders to the calipers in order to clamp the friction material against the discs. The foot pressure is multiplied by the mechanical pedal ratio and the hydraulic ratio of the master cylinders, booster and caliper pistons. Global brake fluid main manufacturers include BP, Exxon Mobil and Total, totally accounting for about 33% of the market. Asia-Pacific is the largest market of brake fluid, holding a share about 41%. The second and third places are Americans and Europe, with share 30% and 26%, separately. In terms of product type, DOT 4 is the largest segment, occupied for a share of 67%. And in terms of application, Automotive Aftermarket has a share about 64 percent.

The global Brake Fluid market size was estimated at USD 1980.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
