Abstracts

Braking systems software refers to the embedded and application-level code that governs the operation of electronic braking systems in vehicles, including anti-lock braking systems (ABS), electronic stability control (ESC), brake-by-wire implementations, and advanced driver assistance systems (ADAS) such as autonomous emergency braking (AEB). This software interprets sensor inputs such as wheel speed, pedal pressure, vehicle dynamics, and environmental conditions to modulate braking force with precision, optimizing safety, responsiveness, and integration with other vehicle control systems. It plays a critical role in ensuring functional safety standards (e.g., ISO 26262) are met, while also enabling features like regenerative braking in electric and hybrid vehicles and supporting over-the-air updates for performance improvements or cybersecurity patches. The complexity of braking software has grown with the rise of electrification, automation, and connectivity, making it a foundational component of modern automotive safety architectures.

The global Braking Systems Software market size was estimated at USD 1580.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
