Report Overview

Brazed Aluminum Heat Exchangers (plate-fin heat exchanger), widely used in many industries, such as Industrial gas production, natural gas processing, petrochemical processing liquid natural gas and others. The typical industry expectation for a BAHX life span is approximately 20 years. Vacuum brazing is a high-end joining technology because it results in parts with extremely strong joints and with no residual corrosive flux. The cost of plate-fin heat exchangers is generally higher than conventional heat exchangers due to a higher level of detail required during manufacture. However, these costs can often be outweighed by the cost-saving produced by the added heat transfer.
