Abstracts

Brazed Aluminum Heat Exchangers (plate-fin heat exchanger), widely used in many industries, such as Industrial gas production, natural gas processing, petrochemical processing liquid natural gas and others. The typical industry expectation for a BAHX life span is approximately 20 years. Vacuum brazing is a high-end joining technology because it results in parts with extremely strong joints and with no residual corrosive flux. The cost of plate-fin heat exchangers is generally higher than conventional heat exchangers due to a higher level of detail required during manufacture. However, these costs can often be outweighed by the cost-saving produced by the added heat transfer. Global 5 largest manufacturers of Brazed Aluminum Heat Exchangers are Linde Engineering, Chart Industries, Fives, Sumitomo Precision Products and Kobe Steel, which make up about 50%. Among them, Linde Engineering is the leader with about 12% market share. Europe is the largest market, with a share over 25%, followed by China and North America, with the share about 24% and 20%. In terms of product type, plain occupies the largest share of the total market, over 35%. And in terms of application, the largest application is Air Separation, followed by Petrochemical Processing and Industrial Gas Production.

The global Brazed Aluminum Heat Exchangers market size was estimated at USD 755.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
