Abstracts

A brazing alloy is a filler metal, when heated, liquifies and melts to flow into the space between two close fitting parts, creating a brazed joint. A brazing alloy has suitable melting and flow properties to permit distribution by capillary attraction in properly prepared joints. Brazing alloys produce joints that meet service requirements, such as strength and corrosion resistance. Standard brazing alloys include tin, silver, cadmium-free, sil-phos, copper, aluminum, nickel, and jewelers gold. Brazing alloys are found in solid form as rings and wire, slugs, washers, and powder, as well as paste. Currently, the global top three external sale manufacturers are: Lucas-Milhaupt, Umicore, Harris Products. Their market share is less than 20%. In future, the competition pattern will not change.
