Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Brazing Torch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Brazing Torch production reached approximately 1,541,667 units, with an average global market price of around US\$ 1,200 per unit. The gross profit margin of major companies in the industry is between 45% ? 65%. Single-line production capacity is 150,000 ? 300,000 units/year. A Brazing Torch is a handheld thermal tool that uses a controlled flame to heat metal joints to a temperature above 450°C, enabling filler metal to flow via capillary action and create a strong, leak-proof bond without melting the base metals. These torches typically use fuel gases such as acetylene, propane, or MAPP gas mixed with oxygen or air, and are widely used in HVAC, plumbing, electronics, and automotive industries for joining copper, brass, and other compatible metals. The global brazing torch market is growing steadily due to rising demand in HVAC, refrigeration, and automotive manufacturing, where reliable and precise metal joining is essential. The increasing adoption of energy-efficient systems has boosted installation and maintenance activities, driving the need for high-performance brazing tools. Advancements in torch design, such as ergonomic handles, adjustable flame control, and compatibility with eco-friendly gases, are enhancing user safety and efficiency. Additionally, the expansion of infrastructure and industrialization in emerging economies is creating robust demand. Growing emphasis on skilled labor training and certification programs further supports market growth. While competition from alternative joining methods like welding and adhesives exists, brazing remains preferred for its versatility, lower heat input, and ability to join dissimilar metals. Manufacturers are focusing on innovation and durability to capture market share in both professional and DIY segments.

The global Brazing Torch market size was estimated at USD 1850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
